(54) Title: AUDIO AND VIDEO TRANSMISSION AND RECEIVING SYSTEM

(57) Abstract

A system (100) of distributing video and/or audio information employs digital signal processing to achieve high rates of data compression. The compressed and encoded audio and/or video information is sent over standard telephone, cable or satellite broadcast channels to a receiver (200) specified by a subscriber of the service, and further processed by the receiver (200) to produce a reconstructed audio and/or video signal.
